# NEMO-NET OBJECTIVES

- 1) Develop an accurate algorithm for mapping coral reefs with remote sensing at different scales.*
- 2) Globally assess the present and past dynamics of coral reef systems through a large-scale active learning convolutional neural network.*
- 3) Implement domain transfer learning for spectral and spatial resolution transfer learning (super resolution) across multiple sensors.*
- 4) Create 3D active learning CNN training game for data training from multiple sensors.*

# NEMO-NET DATA SOURCES

Sensor	Effective Spatial Resolution	3D	Spectral Bands	Locations
 Underwater AUV	0.1 - 5 cm	YES	3	Australia, Great Barrier Reef, Pacific
<b>FluidCam &amp; MiDAR (NASA)</b>	<b>0.1 - 1 cm</b>	<b>YES</b>	<b>3-7</b>	American Samoa, Guam, Western Australia, Puerto Rico, Indo-Pacific
 QuickBird (USGS)	0.65 m	NO	4	US Territories
<b>WorldView-2/3</b>	<b>0.5 - 3 m</b>	<b>NO</b>	<b>8</b>	Global
 LandSat (USGS)	<b>30 m</b>	<b>NO</b>	<b>11</b>	Global

# NEMO-NET CLASSIFICATION HIERARCHY

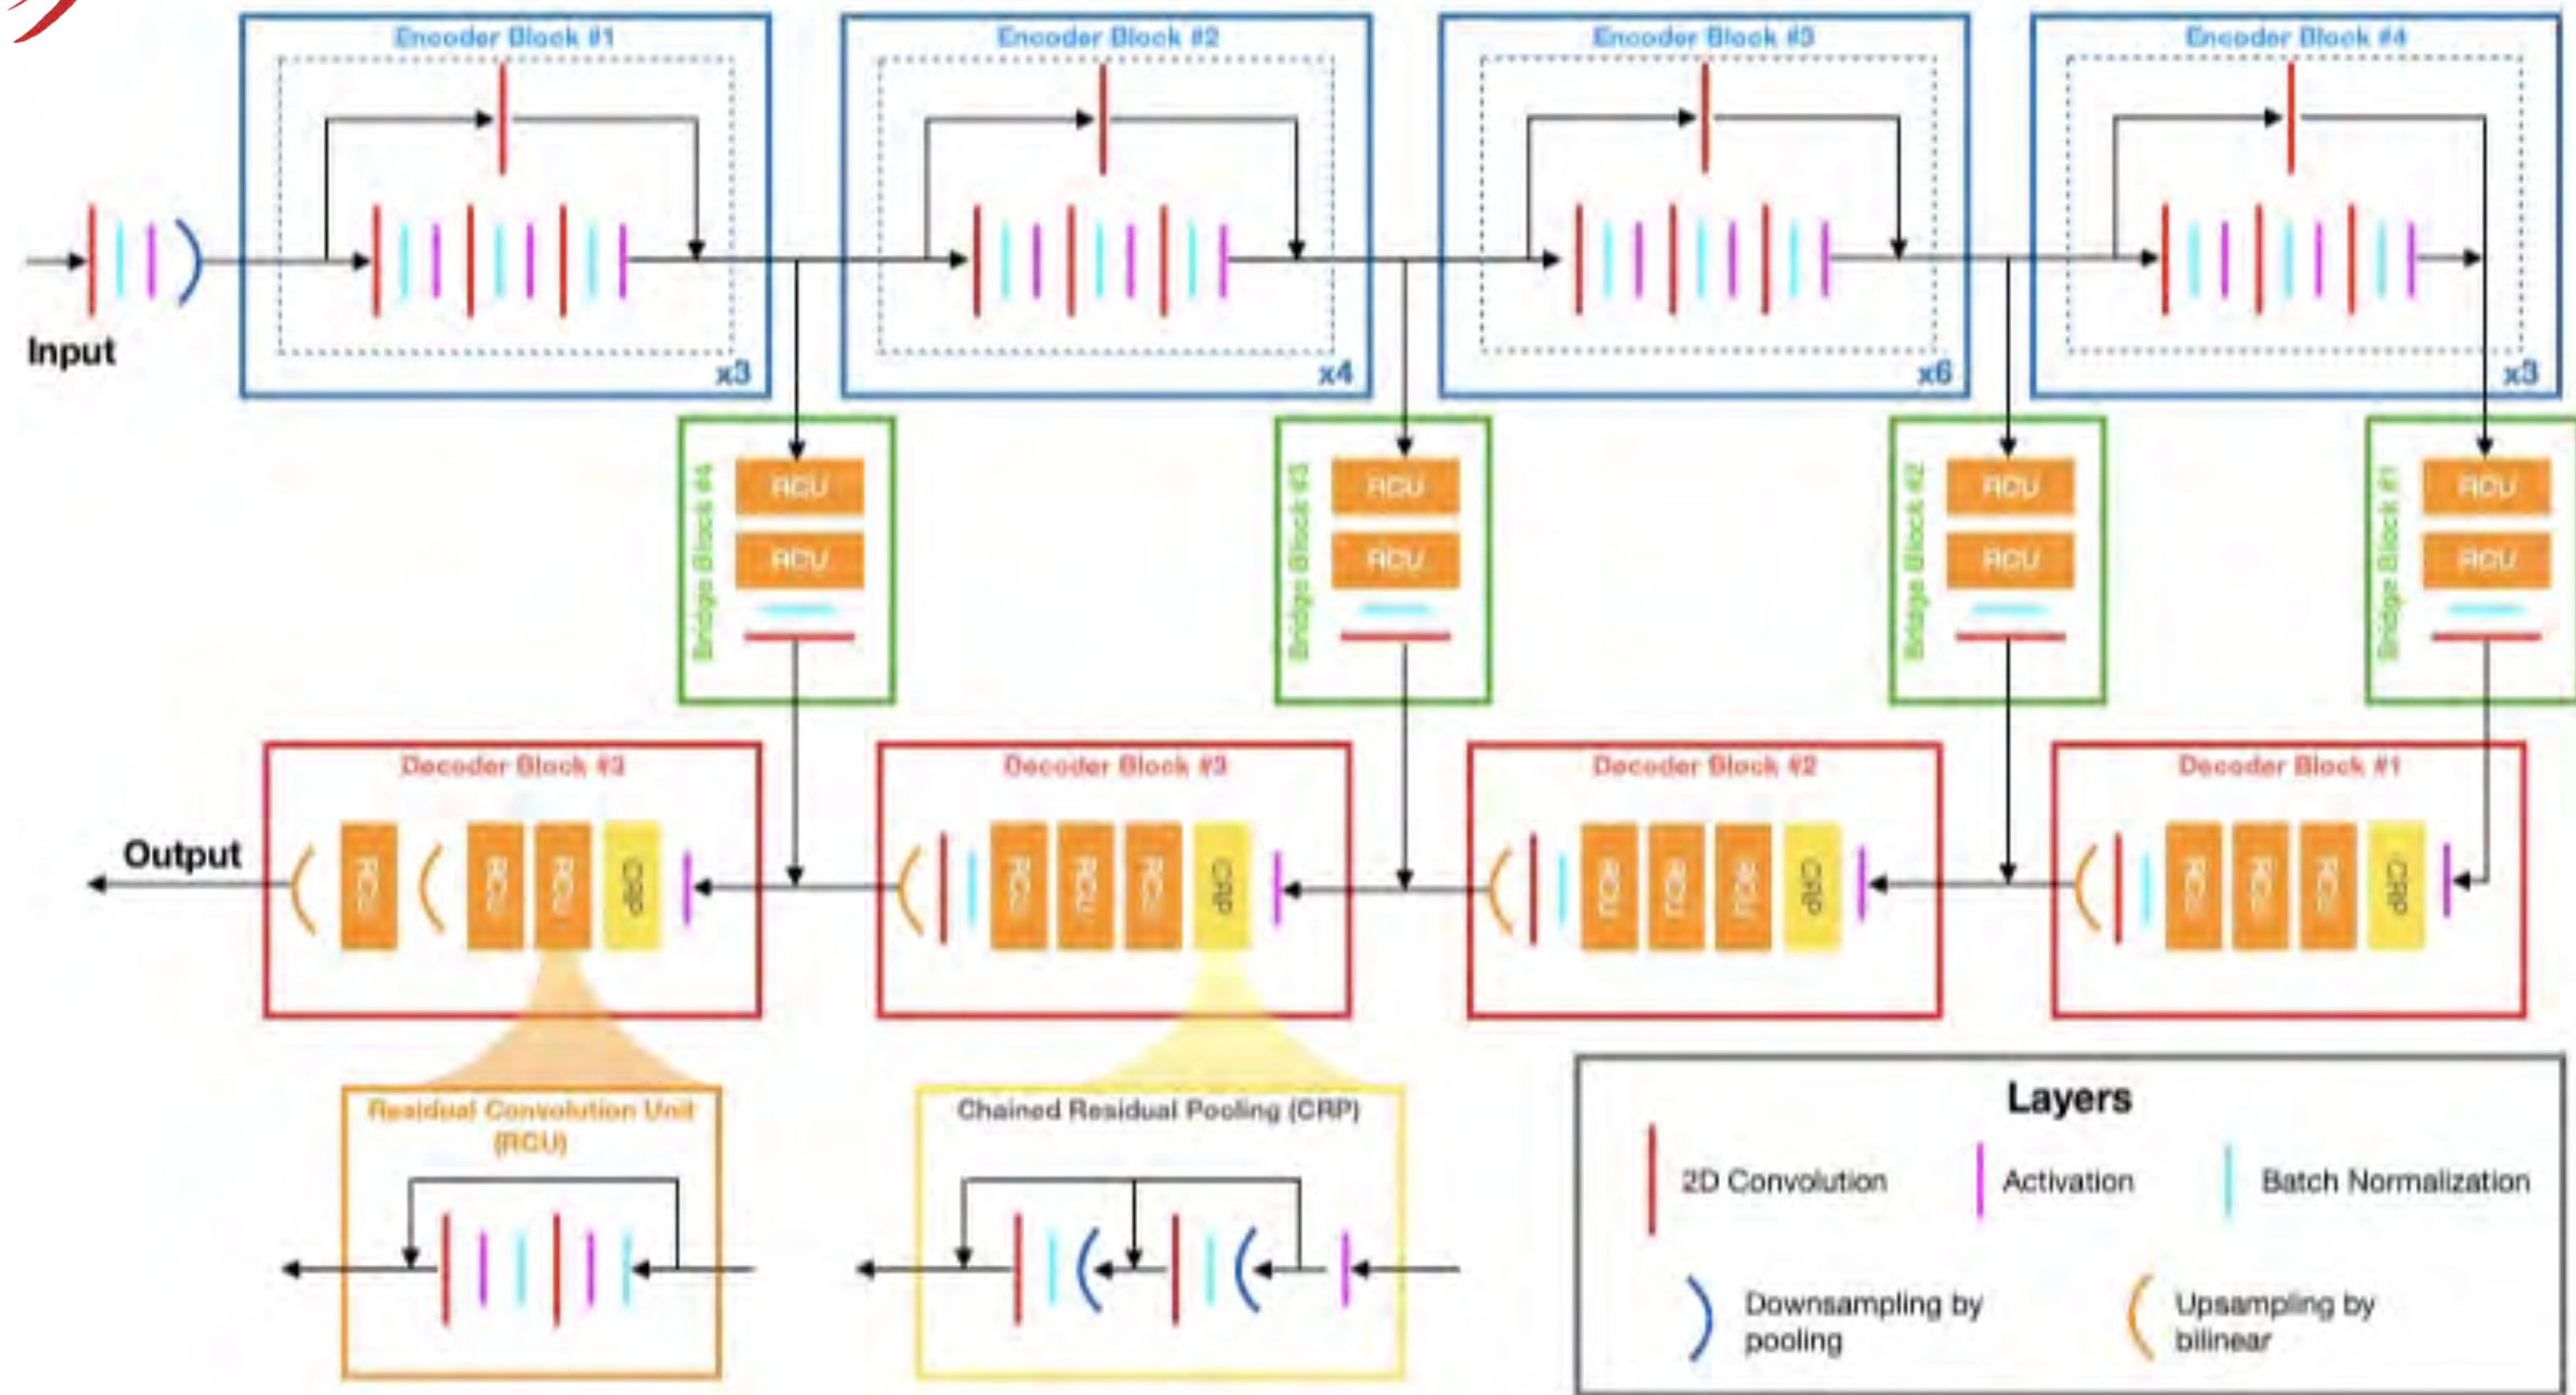

Level 1	Level 2	Level 3	Level 4
Zone	Biological Cover	Biological Morphology	Biological Family
Coral/Algae	Live Coral	Branching Coral	Acroporidae
Bare Substratum	Algae	Massive Coral	Poritidae
Seagrass	Seagrass	Soft Coral	Gorgoniidae
Deep water	Mangrove	Macroalgae	Merulinidae
Clouds	Bare Substratum	Turf algae	Montastraeidae
Breaking Waves	Invertebrate	Seagrass	Mussidae
Beach (Sand, Rock, Dark)	Unknown	Mangrove	Plexauridae
Terrestrial Vegetation		Bare Substratum	Agariciidae
Unknown		Invertebrate	Siderastreidae
		Unknown	Pocilloporidae
			Pectiniidae
			Fungiidae
			Green Algae
			Brown Algae
			Red Algae
			Seagrass
			Mangrove
			Bare Substratum
			Invertebrate
			Unknown
